

BScaler ERM™ Does Everything for the SMB and B2B

For a Business to Business enterprise, there's very little that ERM can't do. This includes rigorous cost tracking of each serial numbered item, a complete, automated General Ledger accounting system, interim Balance Sheets and final end-of-period financial statements with just a few clicks.

After a short learning curve, employees will appreciate how much of their work is made fast and easy by ERM's **intuitive** task support and workflow. If somebody sees a mistake after starting to process an order, they can click ROLLBACK to reverse everything and start again (it keeps history of both directions though). That may be several steps ago, but loses only a very few minutes of human time. ERM undoes everything that it did behind the scenes, and the user starts over cleanly. No mistake gets preserved or hidden for a later surprise.

Even if an Accounting person did something inadvertent to the General Ledger, ERM lets them make corrections because it keeps a history of every step. This time, though, ERM will not erase history. It does what it takes to make things right and records each step with the time and user ID. This follows the GAAP rules and preserves an audit trail for your CPA.

You might be starting up another type of business in the future. ERM lets you create whole new business units, for which it can produce separate profit and loss statements. It bundles the BU numbers together for one grand set of financial statements of the company. This is for **NO extra cost**. You pay only for the number of user licenses that you need.

If you really want to make a completely separate business, it would require another ERM subscription and we will not be able to roll up such separate businesses into one set of statements. Only a CPA is permitted to do this. That is for the future, though. For now, the BScaler ERM will improve your productivity substantially, and give you the free time to create a future without interruption from down times and mistake correction.

No other solution has the functionality, even for a lot more money. You will see this as you evaluate other vendors. ERM is feature-rich for VARs, resellers, distributors and importers.
